Glacier Filtration is a leading specialist in filtration & water treatment equipment and systems for complete sustainable water management and reuse.

Automatic Backwash Filters

Glacier Filtration has a premier range of automatic backwash screen filters available for raw water screening, pre-filtration for Media, Ultra Filtration and Reverse Osmosis. Used in all potable water supply, rain and storm water re-use projects and more.

Media Filtration

Glacier Filtration supplies FRP media filtration systems and components including automatic backwash controls and valves. We have a variety of medias used for suspended solids removal in potable water, rain and stormwater recycling as well as pre filtration in UF and RO plants.

UV Disinfection

Glacier Filtration distributes a wide range of ultra violet disinfection systems for disinfection of potable water, waste water, recycled rain, storm and process water. Spares and replacement parts for our equipment and all well-known brands such as Wedeco, Dulcodes, Trojan and Sterilight are available.

Reverse Osmosis

Glacier Filtration supplies a large range of Reverse Osmosis membrane housings and elements. Preassembled units are available as skid mounted, pre wired and pre plumbed for all industrial and commercial applications.

Ultra-Filtration

Glacier Filtration supply ultra-filtration membrane modules and systems which remove anything larger than 0.02 micron, from almost any water source. This equipment is used for potable water supply to hospitals, food processing areas, villages, campsites and recycling of rain and stormwater.

Bag & Cartridge Filtration

Glacier Filtration stock and distribute a large range of robust FDA approved cartridge and bag filter housings which are manufactured from high grade polypropylene, and/or stainless steel. Glacier also supply a range of cartridges and bags to suit all applications.

Rotorflush Filterpumps

Glacier Filtration is the Australian distributor for Rotorflush equipment. They are high quality submersible pumps with integral self-cleaning intake filters. This allows the high pressure, multi stage pumps to work in water contaminated with suspended solids and produce water filtered from 50-315 microns.
